REPLIT PROOF OF USE

Team: Taygood
Project: Kutip: cash-collection assistant for the Orbyte hub
Repository: https://github.com/YapHongSanHansen/Xmum (public)

Statement: Replit was not used.

Our team did not use Replit to develop, host or run Kutip. We declare this rather than add a token integration (SDC Handbook 8.1.3 and 8.4).

- **Development:** code was written locally and shared through the public GitHub repository.
- **Hosting:** the app runs locally today; Vercel is the planned host for the Next.js app and its server-side AI route.
- **Secrets:** the only key (ANTHROPIC_API_KEY) is stored as a host environment variable and in a local .env.local file that git ignores. No secrets are in the repository.

If the organisers require Replit use for the final round, the repository can be imported into Replit (Create Repl → Import from GitHub) and run with pnpm install and pnpm dev in the web folder.
